aws

Moterra Business AI Suite: Secure Business AI in Your AWS Environment

Challenges

Businesses struggle with multiple AI tools that raise security concerns and costs while offering limited customisation. They need a secure way to consolidate AI capabilities AND adapt them to their specific processes - moving from basic tasks to true business automation when ready.

Customer challenge 1
We're juggling multiple AI tools that cost too much and risk exposing our data.

Customer challenge 2
Generic AI tools help with basic tasks but can't adapt to our specific processes.

Customer challenge 3
We lack the expertise to implement AI effectively and scale it across our business.

Partner solution

Moterra Business AI Suite offers businesses a practical path to AI adoption. Built on AWS, it provides a secure environment where teams can immediately boost productivity with everyday AI tasks - from content creation to document search and research. Unlike generic tools, our platform can grow with your needs, allowing you to build custom AI Agents and AI workflows for your specific processes. With expert support included and fixed monthly pricing, you can start seeing value quickly while laying the foundation for deeper business automation.

Learn more >

Benefit 1
One secure platform for £500/month replaces multiple AI subscriptions, saving £12,000+ annually (based on 50-person team) while keeping data private in your AWS environment
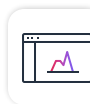

Benefit 2
Start with immediate productivity gains, then build custom AI solutions that automate your unique workflows - from sales and HR to finance and operations

Benefit 3
3 hours monthly with AWS-certified experts help you succeed now and identify future automation opportunities. See results in weeks, not months.
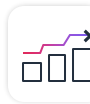

Product feature 1
All-in-one platform with smart AI assistant, document search, and research capabilities - powered by AWS Bedrock and SageMaker in your private environment

Product feature 2
Core platform plus custom module development capability - turn your business processes into automated workflows using your data and business rules

Product feature 3
Usage insights dashboard tracks adoption and ROI while identifying which processes would benefit most from automation. Expert guidance included.

Generative AI
in AWS Marketplace

Organizations are turning to generative AI to increase productivity, create new experiences, gain valuable insights, and augment creativity. Powered by foundation models (FMs) capable of learning complex concepts, generative AI is making an impact across industries.

AWS Marketplace makes it easy to find and access managed generative AI services, along with versatile open-source FMs to streamline integration and accelerate your projects.

Innovate faster across the stack, customize models with enterprise data, and deploy generative AI securely with partner solutions in AWS Marketplace. Unlock generative AI innovation with AWS Marketplace.

Get started with AWS Marketplace

Make generative AI a no-brainer.

Partner

By combining AWS's powerful AI services with Moterra's expertise in business process automation, we help companies unlock AI's full potential. While other solutions offer generic AI assistance, our platform leverages Amazon Bedrock, SageMaker, Amazon Q and other AWS AI services to create custom AI agents and workflows that automate your unique processes, delivering measurable business impact.

AWS Marketplace

AWS Marketplace offers a broad selection of software, data, framework models, and professional services products from vendors that customers trust. AWS Marketplace helps organizations discover, procure, experiment with, and provision third-party software, services, and data. With AWS Marketplace, you can unlock innovation with access to thousands of software listings and improve software governance with streamlined approvals and spend visibility.
